

WHAT IS POSIDONIA?

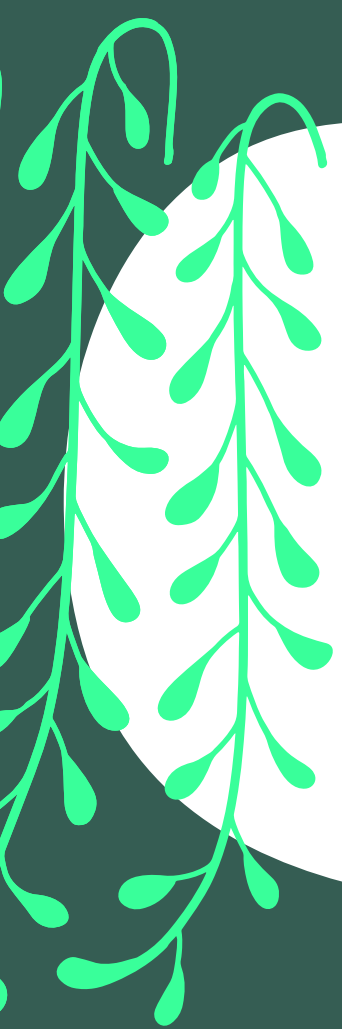

Posidonia is an aquatic plant that grows in the Mediterranean and in some parts of Australia.

WHY DO WE NEED IT?

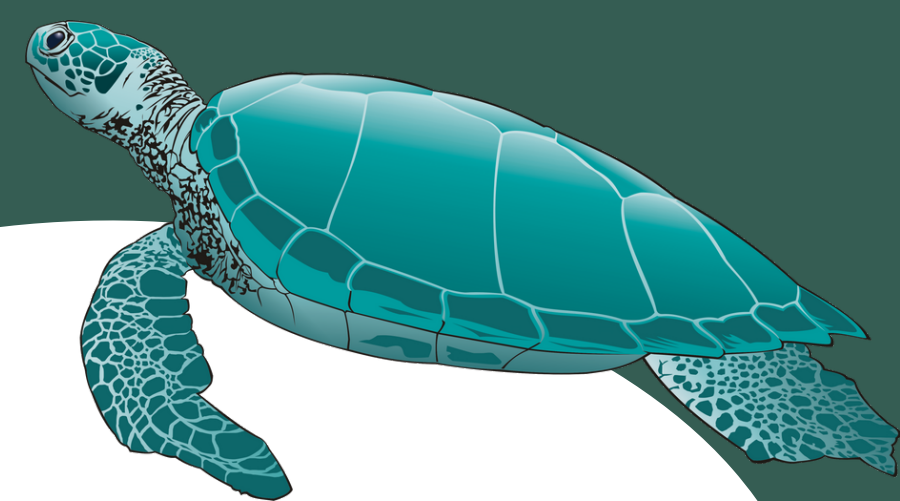

It is called the lungs of the Mediterranean because it is one of the main sources of oxygen and reduces CO₂ which leads into reducing climate change too.

SAVE POSIDONIA, SAVE THE WORLD

HOW CAN WE HELP IT?

By not allowing illegal fishing or letting exotic species grow.

CAUSES OF THE DISAPPEARANCE

Constructing buildings near the sea and throwing fossil fuels
