# CEIP SANT JOSEP DE CALASSANÇ - ESPAGNE

In a school of a city there is a teacher named Manuel. He is a good person. He is clever and kind. He has got a round head and blue eyes. He is wearing glasses. He is short and thin.

In the class there is a child named Dani . He is 9 years old. He's got straight dark hair. He is very playful and funny. He likes vegetables and fruits and he loves playing tennis. His dad is a fireman. He is wearing special clothing, a black helmet and a smoke mask. He is brave, and strong. He is worried about nature. He is a very good fireman because he likes his job.

In the class there is a child named Dani. He is 9 years old. He's got straight dark hair. He is very playful and funny. He likes vegetables and fruits and he loves playing tennis. His dad is a fireman. He is wearing special clothing, a black helmet and a smoke mask. He is brave, and strong. He is worried about nature. He is a very good fireman because he likes his job.

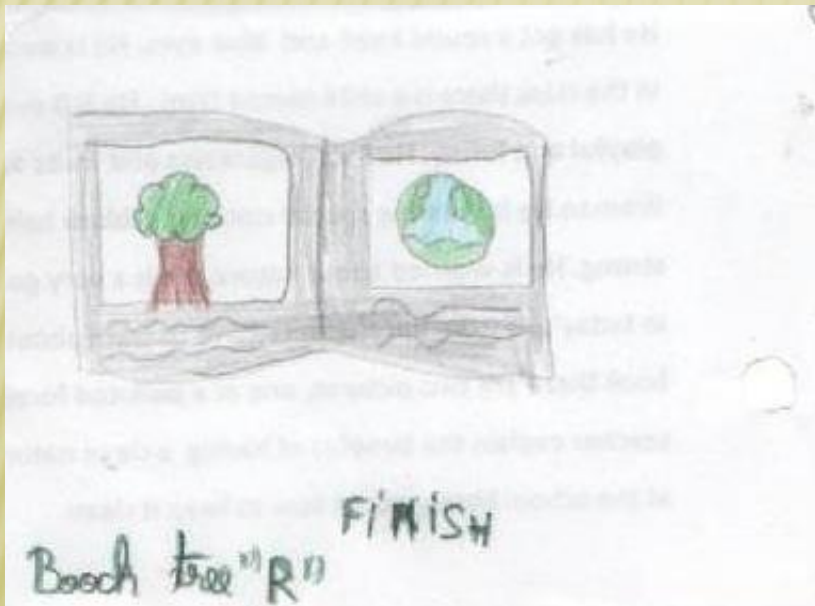

In today's lesson the students have to learn about the importance of the environment. In the book there are two pictures, one of a polluted forest and the other one is a very clean forest. The teacher explain the benefits of having a clean nature and asks the children to find out information at the school library about how to keep it clean.

# ECOLE ANTOINE GIROUST - FRANCE

When they come back from the library, Dani and his two friends Brenda and Lucas have books about the Nature and the Environment. His mother works in the library and helps them to find out information.

She gives them a book “The 3 R” very interesting. “R” for Reduce – Recuperate – Recycle. Reduce of waste. Recuperate the plastic bottles, Recuperate the papers and boxes, Recuperate the glass. Recycle the metal, Recycle the plastic, Recycle the compost. Manuel their teacher is very happy and proud of his pupils because they are motivated. They start to become more and more green.

# VILNIAUS JONO BASANAVICIAUS PROGIMNAZIJA LITUANIE

One day the teacher Manuel decided to have a picnic in the nature. Kids were really excited about it, and the next day after this great news, early in the morning, they started their trip. When they arrived to the campsite they found broken bottles and other rubbish dropped all around. The kids became very upset, but luckily, Brenda and Luce came up with a wonderful idea.

They decided to pick up all the litter and recuperate it. The rest couldn't disagree with this. During the following day the children brought bags and other items that were useful in order to clean all the mess. After completing their good deeds they walked to the empty rubbish containers and threw all the recuperated litter away. After several hours the children were sitting in their classroom, and their teacher Manuel was extremely proud of his pupils.

Véja, 9 m.

# SCOALA GIMNAZIALA NR. 1 - ROUMANIE

But the teacher and his class did not stop here. They wanted to do more to save the environment. So they thought how to design a poster about the environment protection containing ten rules. They planned to display the posters for the people in the city to see.

Each pupil proposed a rule, then from all the proposed rules they chose ten: use a small amount of water; use a bicycle or walk instead of travelling with the car; unplug the electrical equipment after use; put the litter into the bin instead of littering the ground; use energy saver bulbs instead of save electricity; turn down heat and insulate your house properly; reuse and repair; turn off the lights in unused rooms; recycle drink cans, glass bottles, mobile phones, tin cans, newspapers, plastic bottles, batteries, cardboard boxes and metals; plant trees;

They called the poster:  
"The ten commandments to reduce pollution".

# ECOLE LES VIOLENNES - FRANCE

The kids deliver the posters in the whole town and meet a man involved in saving threatened sorts of animals like polar bears, asian tigers,...

The teacher Manuel asks the man if he can come to school and have a conferencing with his pupils. The man comes. He shows them a movie about polar bears. Then everybody can speak about that problem.

Pupils decide to do their best to help these wild animals. They also have a lot of ideas to protect little animals living next to them.

They think they can write to the minister of environment and ask him to create a protected area next to their town.

They also decide to build some wooden nests for birds and a wooden house for insects.

They ask their parents to lend them saws, hammers, screws, nails, ... They recuperate pieces of wood by their families or their neighbours. And they bring all this to school.

Manuel helps them, he is very proud of his pupils.

Dani asks his father if he can put any wood pile in the garden so that a hedgedog family can live there. He also asks his mother to grow a lot of flowers to attract a lot of bees.

# EAST BERGHOLT PRIMARY SCHOOL ANGLETERRE

The next day Dani made a wood pile with his father and helped his mother plant lots of flowers in their garden.

One morning Dani went to check his woodpile. He thought that nothing was there but suddenly a prickly hedgehog came out from underneath the wood. Dani was surprised; he went to tell everyone at school. Manuel and the children were very proud of Dani.

The class received a letter saying that they could make a protected area. Dani, Brenda and Lucus decided to make the area next to the school. They wanted to make a garden to protect insects and plants. They asked other children and their parents to help them.

They called the garden the Bergholt Friendly Garden. They asked for a polytunnel to be put near the Bergholt Friendly Garden .

The Bergholt Friendly garden was perfect!

Soon the poly tunnel arrived. The children were very excited. They were able to plant and look after plants of their own.

Manuel was very proud of his class and what they had done to help their environment.

**THE END**
